aspects of the law.

- Annual information and training for employee groups defined in the Plan.
- Vaccination against Hepatitis B for defined employee groups.
- Personal Protective Equipment (PPE) that may be required.

A copy of the Bloodborne Pathogens Standard

spread through contact with blood, sexual contact, contaminated needles from I.V. drug abuse and from mother to child during pregnancy. Types of job activities that place an employee at risk include tasks that may result in skin penetration with blood contaminated objects, blood contact with cuts and open wounds, contact with blood via the eyes, ears, nose, or mouth, or exposure to blood contaminated bodily fluids.

1. Only those individuals documented in the employer's Exposure Control Plan are required
